

# Heat Pressing Price List

The important thing to note about setting up a Heat Press pricelist, is that there is no complex grid or other system for calculating prices based on sizes or other configurations.

There are only 2 pricing methods for Heat Pressing:

- Flat Price
- Flat Price based on quantity

Which means that you will create a separate item on the price list for every different type & size of heat press you want to do.

[hp\\_price.mp4](#)

The alternative is to adjust the description and price *on-the-fly* while you're entering the order.

## Flat Price

- If you select the Flat Price option you simply need to enter the cost and retail price of your print. This is a very basic flat rate system and the price does not fluctuate.

## Price based on quantity.

- This method will simply do a lookup of a selling price based on the number of items that you print.
  - Click on **Matrix** to enter your quantity and price breaks

Also see [Service Groups](#) to learn how to separate your Heat Press pricelist into sections

**For more detailed information on how to create or edit heat pressing price lists, including *additional charges* and *autoscheduling* - please read our topic on creating [Garment Printing Prices](#), as Heat Pressing Prices operate in exactly the same manner.**
